#### **Assignment 2**

In this assignment you will create a coordinate-based multilayer perceptron in numpy from scratch. For each input image coordinate (x,y), the model predicts the associated color (r,q,b).

You will then compare the following input feature mappings y(v).

- No mapping: y(v) = v.
- Basic mapping:  $\gamma(v) = [\cos(2\pi v), \sin(2\pi v)]^T$ .
- Gaussian Fourier feature mapping:  $\gamma(v) = [\cos(2\pi B v), \sin(2\pi B v)]^T$ , where each entry in  $B \in \mathbb{R}^{m \times d}$  is sampled from  $N(0, \sigma^2)$ .

Some notes to help you with that:

- You will implement the mappings in the helper functions get\_B\_dict and input mapping.
- The basic mapping can be considered a case where  $B \in \mathbb{R}^{2 \times 2}$  is the indentity matrix.
- For this assignment, d is 2 because the input coordinates in two dimensions.
- You can experiment with m and  $\sigma$  values e.g. m=256 and  $\sigma \in \{1,10,100\}$ .

Source: https://bmild.github.io/fourfeat/ This assignment is inspired by and built off of the authors' demo.

#### Setup

#### (Optional) Colab Setup

If you aren't using Colab, you can delete the following code cell. Replace the path below with the path in your Google Drive to the uploaded assignment folder. Mounting to Google Drive will allow you access the other .py files in the assignment folder and save outputs to this folder

```
# you will be prompted with a window asking to grant permissions
# click connect to google drive, choose your account, and click allow
from google.colab import drive
drive.mount("/content/drive")
```

Mounted at /content/drive

```
# TODO: fill in the path in your Google Drive in the string below
# Note: do not escape slashes or spaces in the path string
import os
datadir = "/content/assignment2"
if not os.path.exists(datadir):
  !ln -s "/content/drive/My Drive/CS444 Neha/assignment2/" $datadir
os.chdir(datadir)
! pwd
/content/drive/My Drive/CS444 Neha/assignment2
Imports
import matplotlib.pyplot as plt
from tqdm.notebook import tqdm
import os, imageio
import cv2
import numpy as np
# imports /content/assignment2/models/neural net.py if you mounted
correctly
from models.neural net import NeuralNetwork
# makes sure your NeuralNetwork updates as you make changes to the .py
file
%load ext autoreload
%autoreload 2
# sets default size of plots
%matplotlib inline
plt.rcParams['figure.figsize'] = (10.0, 8.0)
